*peak kW*  
*peak kW*  
*kWh/yr*  
**(across the street from  
Lake Merritt BART station)**

Have you ever wanted to better understand your facilities' energy use, or assess the savings potential of implementing various energy-efficiency projects? This workshop will provide an overview for how to approach and evaluate your options, and tap into available resources. Speakers will provide valuable information on the implementation process, including organizing a team, conducting audits and bill analysis, evaluating potential savings, and selecting project delivery options. In addition, program representatives will provide information on financing and services available to local governments to support the implementation of energy efficiency projects.

RSVP required. To register for this free workshop, contact Erika Walther at (510) 482-4420 x224 or [erika@energy-solution.com](mailto:erika@energy-solution.com).

*California consumers are not obligated to purchase any full fee services or other service not funded by this program. This program is funded by California energy utility ratepayers under the auspices of the California Public Utilities Commission (CPUC).*

**Local Government  
Energy Partnership**
